From Plain to Framework

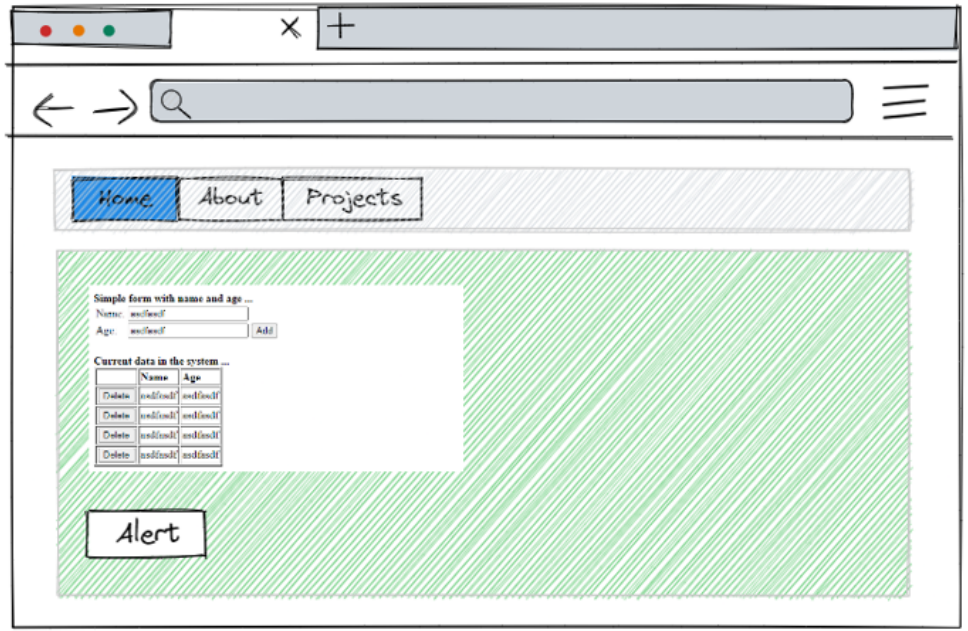
BRIDGE THE GAP BETWEEN PLAIN IMPLEMENTATION AND FRAMEWORK BASED DEVELOPMENT

17.03.2023

Agenda

Our focus for today

- Recap
- Bridge between plain implementation and framworks
- Discussion about tech stack
- Continue working on mockup



Recap

What did we do last time?

- **HTML** - bones of our website
- **CSS** - because style matters
- **JS** - would be boring without interactivity
- **Web Page** - building our first webpage, learn basics of interacting with elements
- **Mockup** - basic functionality for MVP

👷🏻 Plain Impl. - Problems

- Hard to name classes and stick to company naming convention
- Don’t break existing things by adding new styles
- Keep CSS file small and clean
- Use of `!important`

JS

- Manage global state
- Don’t block thread
- Make app reactive
- Keep it fast

👷🏻 Plain Impl. - Do not reinvent the wheel

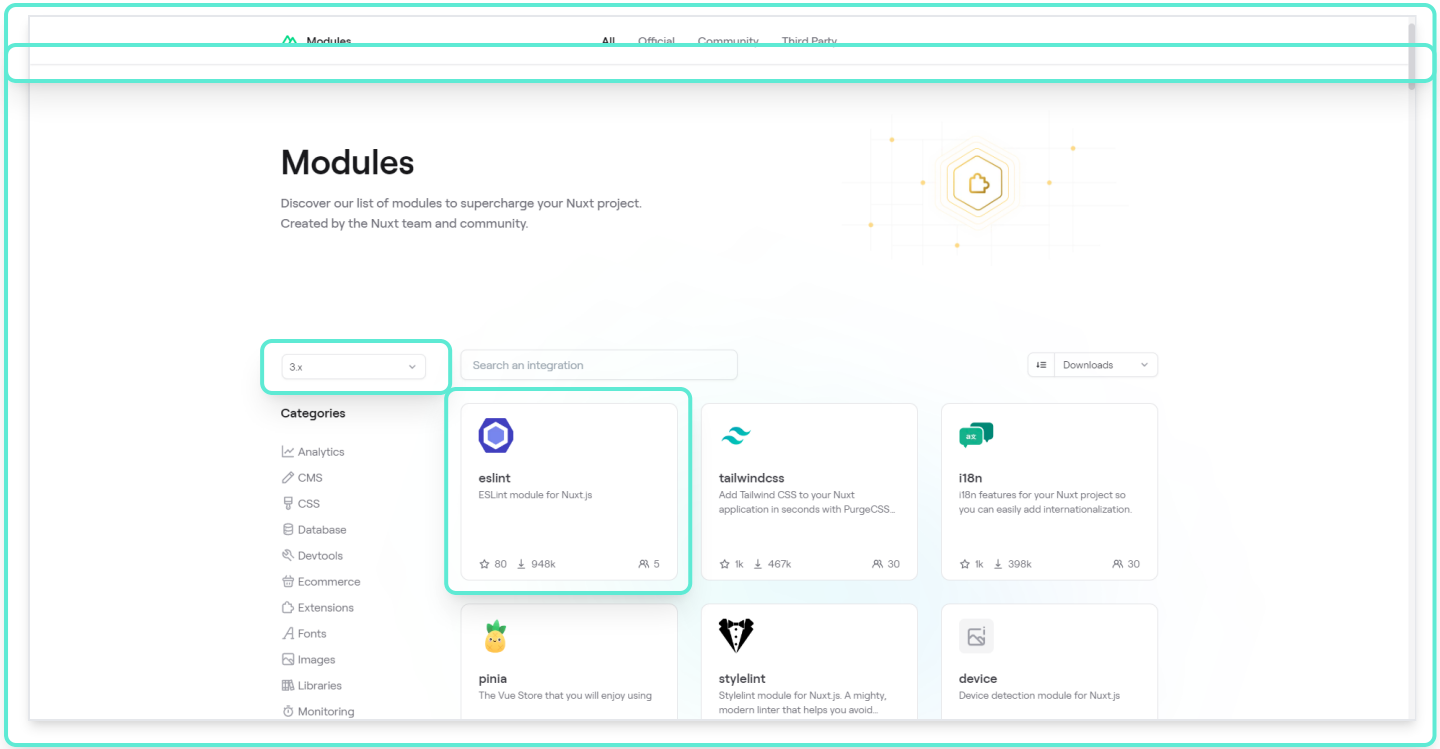
Goal

- Reuse working things
- Don’t waste time on basic building blocks
- You do not have expertise for everything

👷🏻 → ✨ Frameworks to the rescue

- Comes with best practices
- Given structure (faster onboarding of new team members)
- Things implemented the right way (no need for detailed expertise)
- Faster time to market (TTM)
- Easy customisation
- Tech:
  - Frontend layers (layouts, pages, components)
  - Router (Frontend, Backend)
  - State management
  - Error handling

✨ Frameworks - Common Structures of Website



Frameworks - Views

Layouts

✨ Frameworks - Views

Pages

✨ Frameworks - Views

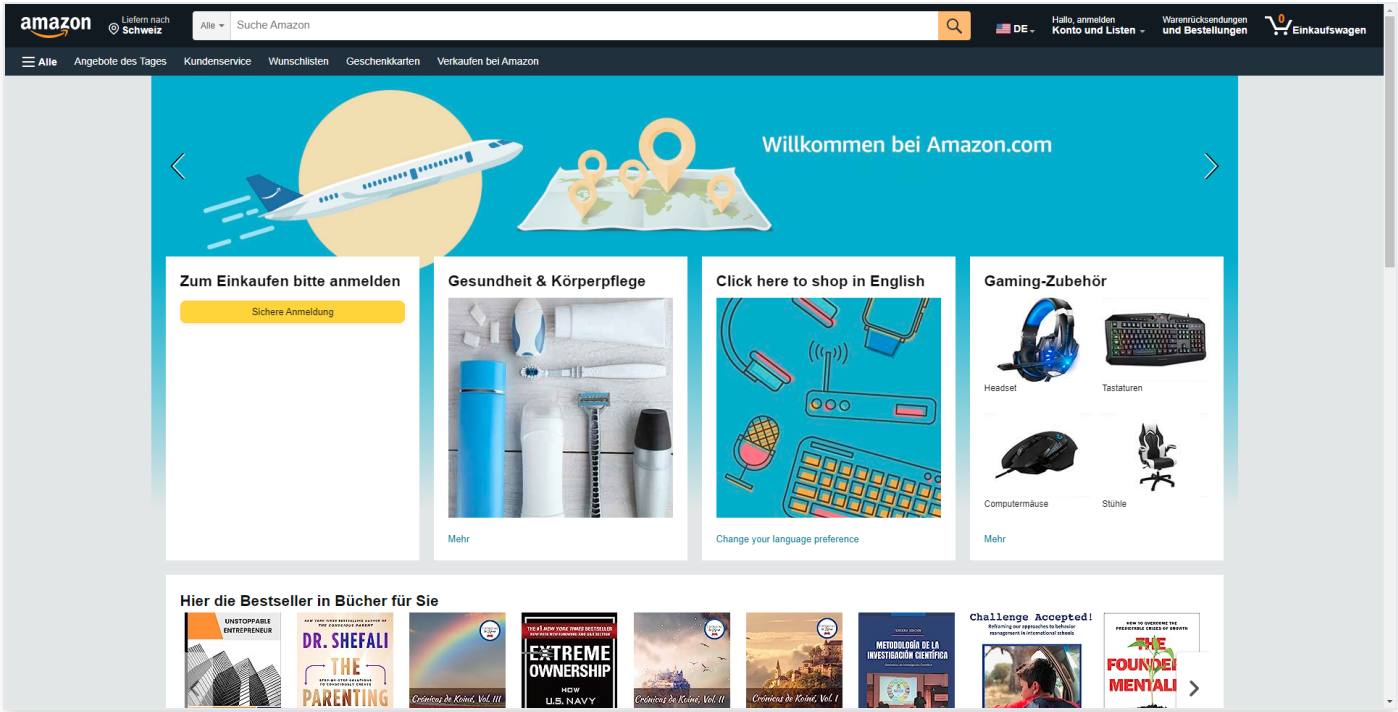
Components

✨ Frameworks - Other benefits

- Project structure
- Application lifecycle
- Plugins / Modules
- Routing
- Error handling
- State handling

Lab - Find the Components

Amazon



Lab - Find the Components

Apple

Preparing for Discussion

Requirement ideas for tech stack

- TypeScript support
- Rich ecosystem
- Large community
- Error handling, data fetching, state handling, ...
- Easy to start with (good DX)
- ❓ Other things

Discussion

Tech stack

Some Ideas

FRAMEWORK

Nuxt (Fullstack Framework)

UI LIBS

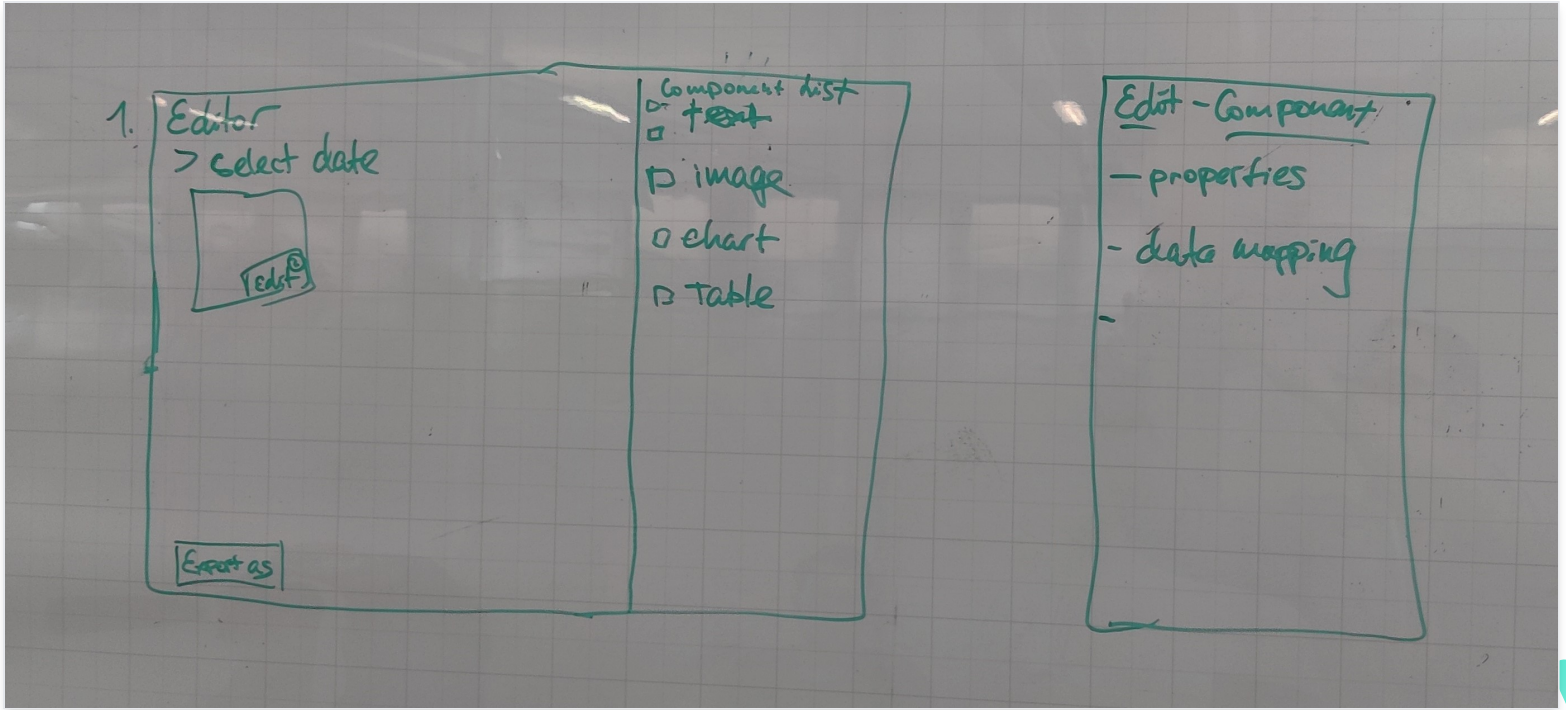
TailwindUI - Premade components and pages

NaiveUI - Lot of functional controls

shadcn/ui - Modern theme

LAYOUT IDEAS

go-view - Report editor

Working on Mockup


Basic component structuring
